\* Most recent student enrollment figures are from 2001-2002

Table shows average yearly teacher turnover from 2001 to 2004 and average yearly percentage of out of field teachers from 2001 to 2004 for all districts in each region. Districts are sorted by community type, then alphabetically within each region.

Turnover rates are the percentages of teachers employed in one year in a district, but not employed in the district in the following year, averaged over four years from 2001 to 2004. Out of field rates are the percentages of teachers in each district assigned to teach subjects for which they do not hold a standard teaching certificate, averaged over four years from 2001 to 2004. Regional and state turnover rates and out of field teaching percentages are averages of district rates in each region and the whole state.

Student enrollment is the student membership in each district for 2002-2003 as reported by TEA in AEIS. Community type is the classification of each district as reported by TEA in PEIMS. Individual campuses that act as their own LEAs, such as charter schools, are not included.
